Q12 2            Q13 5

[ III ]

Q14 4            Q15 4            Q16 5            Q17 1            Q18 1  
Q19 1            Q20 5            Q21 1            Q22 5            Q23 1  
Q24 4            Q25 5            Q26 3

[ IV ]

Q27 5

**Writing Answer Question A**

Possible answer choices:

Anticipated, Commission, Experienced, None, Omission, Process, Role.

Situation	Regret Type	Bias Type
(1) While in severe discomfort, a patient strongly begs for a medication that has a high risk for side-effects and the patient later develops some of the actual side-effects.	Experienced	Commission
(2) A young adult is having great difficulty deciding whether or not to try e-cigarettes, because many of his friends are using them. He ultimately decides not to, but feels left out.	Anticipated	Omission
(3) An adult with a lifelong gender identity crisis underwent transgender (gender reassignment) surgery, but later developed complications from the surgery. She is shocked to learn afterwards that hormonal therapy would likely have accomplished her desired treatment goals without the surgery.	Process	None

**Writing Answer Question B**

gaps often exist, the time, discovered, implementation occurs

**Writing Answer Question C**

pathogens, planet

以上
